

Abstract of the Disclosure

A lithium (Li) polymer battery is provided. The Li polymer battery includes: a positive plate including a positive collector having a plurality of openings and a positive active material layer ~~formed~~ on at least one surface of the positive collector; a negative plate including a negative collector in a foil form, and a negative active material layer ~~formed~~ on at least ^{one} surface of the negative collector; and a separator between the positive and negative plates, for insulating the positive and negative plates.
